

ATTENTION: YOUNG ADULTS WITH AUTISM!

WE'RE CALLING ON YOU TO JOIN US FOR AN
INCREDIBLE OPPORTUNITY

Researchers at Fordham University and the Atlas Foundation for Autism are seeking new ways for people with autism to communicate effectively. Emotional Vocal Exploration Therapy (EVEnt) is an innovative therapy that empowers students' voices and creates conversation! We want you to join us, talk with us, and start your own conversation!

JOIN US FOR A RESEARCH STUDY ON CONVERSATIONAL THERAPY!

What are the goals of the therapy/research study?

- improve conversational skills not sufficiently addressed in other existing ASD therapies (e.g. topic initiation/switching/maintenance, conversational turn taking, conversational depth, expressing emotional likes/dislikes)
- teach the utility of language in advocating/expressing needs and desires

Would the study be a good fit for me/my family member?

This study would be a good fit for young adults who are:

- ages 15-35 with a diagnosis of Autism Spectrum Disorder
- are minimally verbal (or some expressive language impairment)
- can attend several weekly sessions at the Atlas Center for Autism in NYC starting March 2017

What would happen if I took part in the study?

If you qualify and are accepted for the study, you will receive:

- FREE weekly communication therapy (for 12 weeks) with expert autism clinicians
- FREE supervised access to the Atlas Foundation's sensory gym before and after communication therapy sessions
- Financial compensation for participation in the study
- FREE assessments in the following areas: language skills, conversation skills, autism severity/symptomatology by top tier speech pathologists, occupational therapists and psychologists.
- FREE training for families to learn how to implement this communication therapy at home
